# HOW **SCALABLE AUDIO** SHAPES **FUTURE-READY** **CAMPUS DESIGN**

Featuring Bose Professional audio solutions

Higher education is focused on creating intuitive, consistent AV and UC experiences for students and faculty. Standardized and scalable solutions are key to maintaining that consistency.

Yet, campuses face unique challenges. Evolving learning styles, shifting program priorities, and rapid technology advancements make it essential to plan for what's next. Future-ready design requires systems that are flexible, adaptable, and able to scale with institutional growth.

Audio sits at the heart of this transformation. The right solutions can ensure clear communication, unified collaboration, and a better experience for everyone on campus.

This article explores how Bose Professional solutions provide a strong foundation for building your future-ready campus.

## **Deliver flexible, scalable sound across every space**

Universities need AV systems that can easily adapt as their needs evolve. Bose Professional solutions deliver consistent, high-quality performance across rooms of any size, making it simple to scale up or down as programs change. EdgeMax™ loudspeakers combine the power of wall-mounted performance with the clean, streamlined look of ceiling installation. Their wide, even coverage supports both small and large spaces, giving designers the flexibility to create functional, uncluttered environments. The result is flexible sound that enhances clear communication and active learning throughout the campus.

## **Create unified collaboration experiences**

Future-ready campuses are built for long-term adaptability, where consistent audio quality fosters trust in the technology that supports learning and collaboration. With Bose Professional solutions, faculty and students benefit from reliable, clear sound in every classroom, lab, and meeting space, ensuring every voice is heard and every idea shared. IT teams also gain peace of mind with systems that integrate seamlessly and remain easy to manage over time. The result is a unified, dependable campus experience that empowers connection and prepares institutions for the future.

## Simple install and maintenance

Faster installations and easier upkeep help campuses save valuable time and resources. Bose Professional EdgeMax ceiling-mounted designs reduce the number of installation points, resulting in less disruption during setup and shorter deployment timelines. With fewer mounts and simplified configurations, ongoing maintenance and troubleshooting are easier, allowing IT teams to focus on supporting students and faculty rather than system repairs.

## Create your flexible campus with AVI-SPL and Bose Professional

AVI-SPL and [Bose Professional](#) work together to help colleges and universities design, deploy, and support AV and UC solutions that evolve with institutional goals. Our teams collaborate to map sound coverage for each space, align acoustic design with architectural intent, and deliver systems that meet both performance and aesthetic standards.

Together, we bring the expertise, technology, and partnership needed to create lasting value across every campus environment.

**Bring future-ready sound to your campus with AVI-SPL and Bose Professional.**
